

HB 452 Achievement Credit for Parolees- Fact Sheet

Ex-Offenders who earn a GED, Vocational Certification, or College Degree has significantly lower recidivism / re-offence rates and save society in tax dollars spent on supervision, incarceration and public assistance.

Recidivism vs Education

1991 Texas Department of Criminal Justice 12 year study showed:

- 13.7 percent for parolees holding associate degrees,
- 5.6 percent for holders of bachelors' degrees
- 0 percent for those with masters' degrees.

2003 Three State Study (Maryland, Minnesota and Ohio 2003.)

- Study confirms findings of Texas study.

- 2005 National Institute of Corrections Study
 - 50 State Survey of data and education policy.
 - Reconfirmed findings of Texas and Three State study.

Cost of Recidivism

- \$25,185.00 per year cost of incarceration (source DOC fact sheet - DOC website)
- Family public assistance - Offenders family

HB 452 allows for a successful re-entry into society after a period of supervision and personal achievement. The Bill also reduces recidivism and the costs associated with it. The bill accomplishes this in three ways.

- (1) Allow those who have learned from their mistakes to re-enter society by hard work and achievement.
- (2) Reduces recidivism thus protecting the public and allowing resources to be directed more efficiently.

- (3) Promotes self improvement / work skill development through positive personal action.

The credits are based on personal achievements and behavior of the parolee. The parolee is responsible for keeping the appropriate records and applying for the sentence credit. In the studies above and others it has been shown, that those individuals who after their conviction have earned their GED, College Degree or completed a vocational program have recidivism rates that are significantly lower than those who do not.

Conclusion

The prison and parole population is growing, recidivism is a problem that affects the offender, their families and society in many ways. Studies done in the last 20 years have consistently shown that education is key in reducing the recidivism rate. Passage of HB 425 will be a step in the right direction in reducing costs to the taxpayer and in promoting sound correctional policy.
